

Scoping Study on Private Sector Partnerships for Advancing ECD in Francophone West and Central Africa

Kick-off meeting

26 February 2025

1. Context and objectives

2. Key focus areas

3. Analytical approach and preliminary findings

4. Timeline

Context of our engagement

Context

- **Underinvestment in ECD by Governments:** As of 2024, countries like Côte d'Ivoire allocated only 0.05% of their GDP to preschool education, significantly below the 1% recommended by the International Labour Organization (ILO).
- **Critical need for ECD investment:** In 2022, over 31.3% of children under five in sub-Saharan Africa were stunted, indicating chronic malnutrition and underscoring the urgent need for comprehensive ECD programs. Notably, within sub-Saharan Africa, Central Africa has the highest prevalence, with 37.4% of children under five affected by stunting.
- **Potential of private sector engagement:** Increased investment in ECD could create millions of jobs by 2030, with 65% benefiting women, thereby promoting economic growth and gender equity.
- **Corporate Social Responsibility (CSR) alignment:** Many private sector entities are seeking avenues to fulfill their CSR objectives. Aligning CSR activities with ECD initiatives offers companies an opportunity to make a meaningful impact on community development while enhancing their corporate reputation.

Scope & Objectives

Goals

- **Identify the most relevant countries to launch ECD strengthening initiatives in collaboration with the private sector**
The project aims to identify and prioritize the most relevant countries for launching ECD initiatives in collaboration with the private sector.
- **Evaluate private sector engagement models and best practices**
The project aims to evaluate private sector engagement models and best practices, analyzing their effectiveness and potential for scaling within ECD initiatives.
- **Analyze the barriers to collaboration with private sector**
The project will focus on analyzing the barriers to collaboration with the private sector, identifying key challenges and potential solutions for better partnerships in ECD.
- **Identify collaboration opportunities to support private sector initiatives**
The project seeks to identify collaboration opportunities to support private sector initiatives, fostering strategic partnerships that enhance ECD interventions.
- **Strategy guidance and recommendations**
The project provides strategy guidance and recommendations to strengthen private sector engagement and optimize ECD interventions.

Project scope

- 14 countries
- 6 value chains (the selected early childhood development dimensions)
- ~ 8 activities per value chain
- More that 25 stakeholders
- 15-20 interviews with private companies, public sector, caregivers, etc.

1. Context and objectives

2. Scope and focus areas

3. Analytical approach and preliminary findings

4. Timeline

The proposed analytical framework will anchor on three areas of research

1

COUNTRIES

- Which countries are we targeting?
- What are the selection criteria?

2

POTENTIAL AREAS OF INTERVENTION

- What are the key sectors for more impact?
- What are the challenges to consider?
- Which value chains present the most opportunities?

3

PRIVATE SECTOR PARTNERSHIP

- What are the largest companies in the target sectors?
- What are the opportunities for collaboration?

KEY DISCUSSION POINTS

- What do we already know?
- What kind of private sector?
- Which data collection methods would work best?
- How should the Van Leer Foundation be involved in the project?
- Which key stakeholders should be involved?

We will break down the central ask of the ToR into three key focus areas

Focus area 1: Produce a report that provides an overview of the value chains of key sectors in prioritized countries, as well as major private sector partners.

Desk research

Focus area 2: Analyze the alignment of the interventions of key private sector actors in priority countries with those of Van Leer Foundation.

Interviews and desk research

Focus area 3: Define a partnership approach with the key identified players in each area of intervention in prioritized countries.

Interviews, synthesis, analysis and recommendations

1. Context and objectives

2. Key focus areas

3. Analytical approach and preliminary findings

4. Timeline

Focus area 1 requires identification of the criteria used to select countries and detail value chains (1/2)

Children developmentally on track

Rationale

- Countries where fewer children are developmentally on track indicate a need for stronger ECD interventions
- Strong early childhood development reduces learning difficulties, dropout rates, and economic disparities later in life

How it helps in country selection

- Identifies countries with low ECD performance where targeted interventions can improve child development outcomes
- Supports long-term goals for improving education, employability, and health outcomes

Attendance in early childhood education (ECE)

- ECE attendance is a strong predictor of lifelong learning, employment, and social mobility
- ECE directly impacts literacy, numeracy, and social skills

- Identifies countries with low access to preschool education, where investment in infrastructure, training, and materials can have the highest impact
- Highlights opportunities for public-private partnerships (PPPs) in preschool expansion

Children with inadequate supervision

- Working parents lack access to affordable childcare, leading to negative developmental impacts
- High levels of inadequate supervision signal the need for quality childcare services and daycare centers

- Highlights opportunities for investment in early learning centers, employer-supported daycare, and nanny training programs
- Helps align ECD strategies with social protection policies and economic empowerment initiatives for women

Focus area 1 requires identification of the criteria used to select countries and detail value chains (2/2)

Minimum acceptable diet

Rationale

- Nutritional deficiencies in early childhood are linked to lower educational attainment and workforce productivity in adulthood
- A poor diet in early childhood leads to malnutrition, cognitive delays, and poor health

How it helps in country selection

- Identifies opportunities for private sector investment in fortified foods, school feeding programs, and food distribution
- Ensures complementary integration of nutrition programs with education and health interventions

Early stimulation and responsive care

- A child's home environment plays a crucial role in brain development, emotional security, and school readiness
- Countries with low scores indicate limited caregiver knowledge and access to educational resources

- Aligns ECD efforts with family-centered policies and community interventions
- Prioritizes countries where families need better support, training, and awareness programs on child stimulation

Under-five stunting

- Countries with high stunting rates often have poor maternal nutrition, limited healthcare access, and food insecurity
- It affects cognitive development, school performance, and long-term health outcomes

- Highlights opportunities for investment in child nutrition programs, food fortification, and maternal healthcare
- Prioritizes countries where severe malnutrition affects early childhood learning and health

On the six selected dimensions of ECD, almost all countries in West Africa have above-average rates of children developmentally on track

Early childhood development dimensions	Côte d'Ivoire	Senegal	Mali	Togo	Guinea	Benin	Burkina Faso	Niger
Population of children under 5	4,262,981	2,611,432	4,100,937	1,285,752	2,118,927	2,173,104	3,610,877	5,144,747
Children developmentally on track (%)	39	67	62	52	49	41	-	-
Minimum acceptable diet (%)	14	9	8	13	4	15	27	-
Home environment - Early stimulation and responsive care (%)	29	20	55	19	31	39	14	-
Attendance in early childhood education (%)	4	21	5	20	9	13	3	3
Children with inadequate supervision (%)	20	39	32	29	34	29	-	-
Under-five stunting (%)	20	17	24	22	28	30	22	47

■ High (>50%)
 ■ Medium (≥30%)
 ■ Low (<30%)

Sources: UNICEF Data: Monitoring the situation of children and women, Early childhood development; Nurturing Care for Early Childhood Development, World Health Organization, World Bank Group, UNICEF, EARLY CHILDHOOD DEVELOPMENT, 2023 country updates

Children develop mentally on track (%): Proportion of children aged 24-59 months of age who are developmentally on track in health, learning and psychosocial well-being.

Minimum acceptable diet: This measures the number of different food groups a child consumes daily.

Early stimulation and responsive care (%): It measures the percentage of children aged 24 to 59 months who, within the three days preceding the survey, engaged in four or more activities that promote learning and development with any adult household member.

Attendance in early childhood education: Percentage of children 36–59 months old who are attending an early childhood education program.

Children with inadequate supervision: Percentage of children 0–59 months old left alone or in the care of another child younger than 10 years of age for more than one hour at least once in the past week.

Under-five stunting: Under-five stunting refers to the percentage of children under five years old whose height-for-age is more than two standard deviations below the World Health Organization (WHO) Child Growth Standards median, indicating chronic malnutrition.

The same trend is observed in Central Africa, where better performances in home environment and attendance in early childhood education are also noted

Early childhood development dimensions	Central African Republic	Gabon	Chad	Congo	DRC	Cameroon
Population of children under 5	1,014,461	307,092	3,304,647	851,838	18,199,988	4,403,597
Children developmentally on track (%)	36	-	45	61	57	61
Minimum acceptable diet (%)	9	-	11	4	8	10
Home environment - Early stimulation and responsive care (%)	27	-	55	59	44	44
Attendance in early childhood education (%)	6	-	1	36	5	28
Children with inadequate supervision+ (%)	49	-	64	42	47	34
Under-five stunting (%)	40	13	32	17	40	27

■ High (>50%)
 ■ Medium (≥30%)
 ■ Low (<30%)

Under-five stunting: Under-five stunting refers to the percentage of children under five years old whose height-for-age is more than two standard deviations below the World Health Organization (WHO) Child Growth Standards median, indicating chronic malnutrition.

Following the identification of criteria and preliminary analysis, we suggest the selection of focus countries using the following approach

Country scoring factors

1

ECD dimensions (6) performance review:

- The lower a country's performance on ECD dimensions, the higher its priority for intervention
- Countries with weaker ECD rates are given more priority

2

Under five population data:

- Countries with a larger under-five population are ranked higher
- Interventions in these countries could have a greater impact on a larger number of children

Scoring (i)

- If the dimension score is Low = **5 points**
- If the dimension score is Medium = **3 points**
- If the dimension score is High = **1 point**

- More than 4 million = **5 points**
- Between 2 and 4 million = **3 points**
- 2 million or less = **1 point**

(i) The score is linked to the country's performance on each dimension

Based on each country's performance on the dimensions, we obtain a ranking with West African countries at the top of the priorities

	West Africa								Central Africa					
	CIV	SEN	MALI	TOGO	GUIN	BENIN	BURK	NIGER	CAM	GAB	CAR	CONG	DRC	CHAD
Children developmentally on track	3	1	1	1	3	3	-	-	1	-	3	1	1	3
<u>Minimum acceptable diet</u>	5	5	5	5	5	5	5	-	5	-	5	5	5	5
Early stimulation and responsive care	5	5	1	5	3	3	5	-	3	-	5	1	3	1
<u>Attendance in early childhood education</u>	5	5	5	5	5	5	5	5	5	-	5	3	5	5
Children with inadequate supervision	5	3	3	5	3	5	-	-	3	-	3	3	3	1
<u>Under-five stunting</u>	5	5	5	5	5	5	5	3	3	5	3	5	3	3
Population of children under 5	5	3	5	1	3	3	3	5	5	1	1	1	5	3
Total score	33	27	25	27	27	29	23	13	25	6	25	19	25	21

- **Children develop mentally on track:** Proportion of children aged 24-59 months of age who are developmentally on track in health, learning and psychosocial well-being.
- **Minimum acceptable diet:** This measures the number of different food groups a child consumes daily.
- **Early stimulation and responsive care:** It measures the percentage of children aged 24 to 59 months who, within the three days preceding the survey, engaged in four or more activities that promote learning and development with any adult household member.
- **Attendance in early childhood education:** Percentage of children 36–59 months old who are attending an early childhood education program.
- **Children with inadequate supervision:** Percentage of children 0–59 months old left alone or in the care of another child younger than 10 years of age for more than one hour at least once in the past week.
- **Under-five stunting:** Under-five stunting refers to the percentage of children under five years old whose height-for-age is more than two standard deviations below the World Health Organization (WHO) Child Growth Standards median, indicating chronic malnutrition.

Scoring

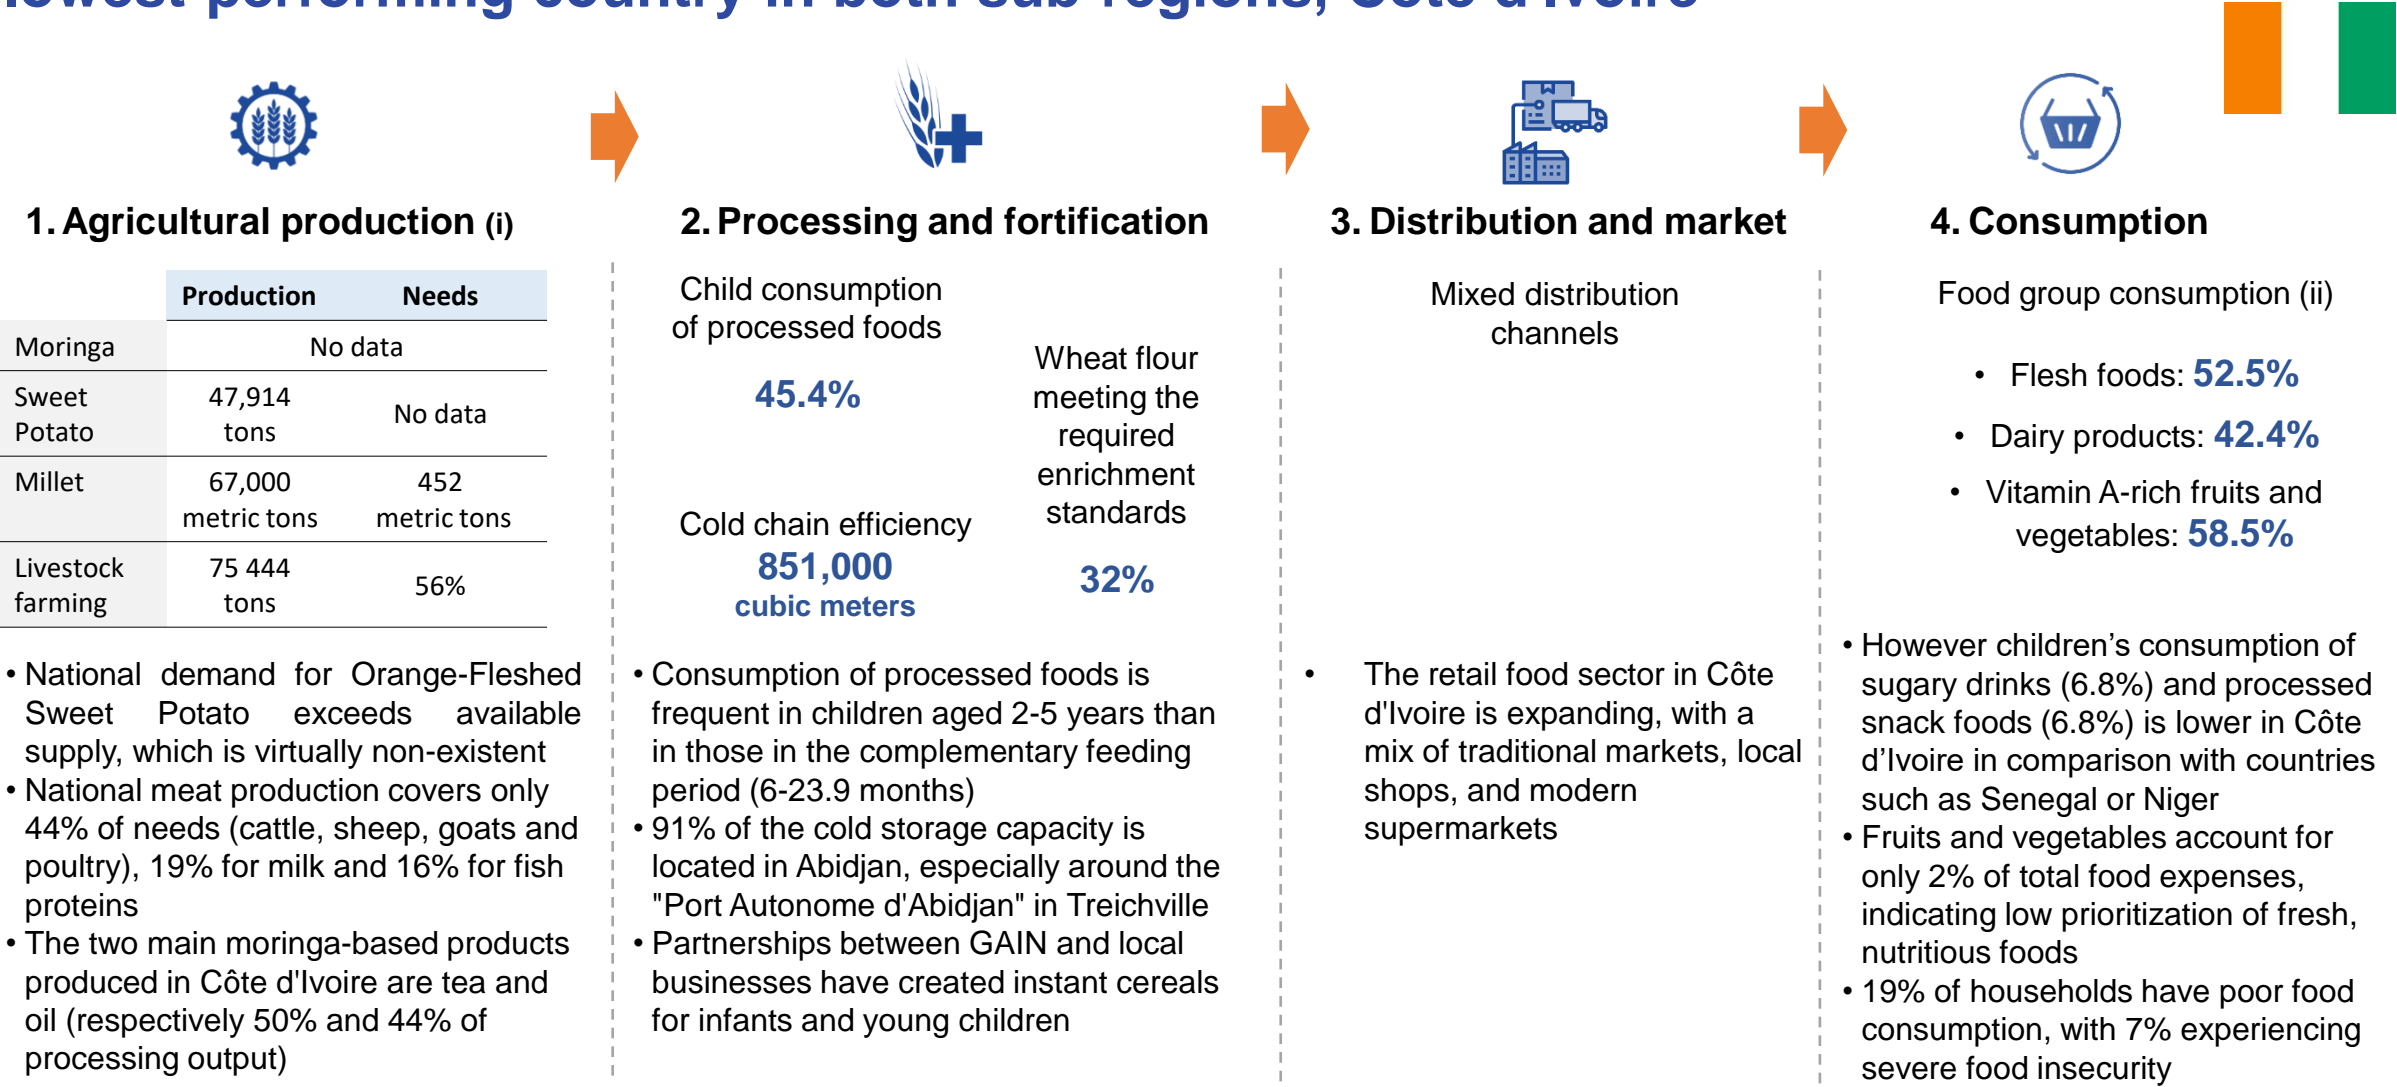

- If the dimension score is Low = **5 points**
 - If the dimension score is Medium = **3 points**
 - If the dimension score is High = **1 point**
-
- More than 4 millions = **5 points**
 - Between 2 and 4 millions = **3 points**
 - 2 millions or less = **1 point**

Minimum acceptable diet is one of the EDC dimensions on which countries as a whole perform least well, and requires particular attention

- Key activities
- Stakeholders
- Cross cutting themes

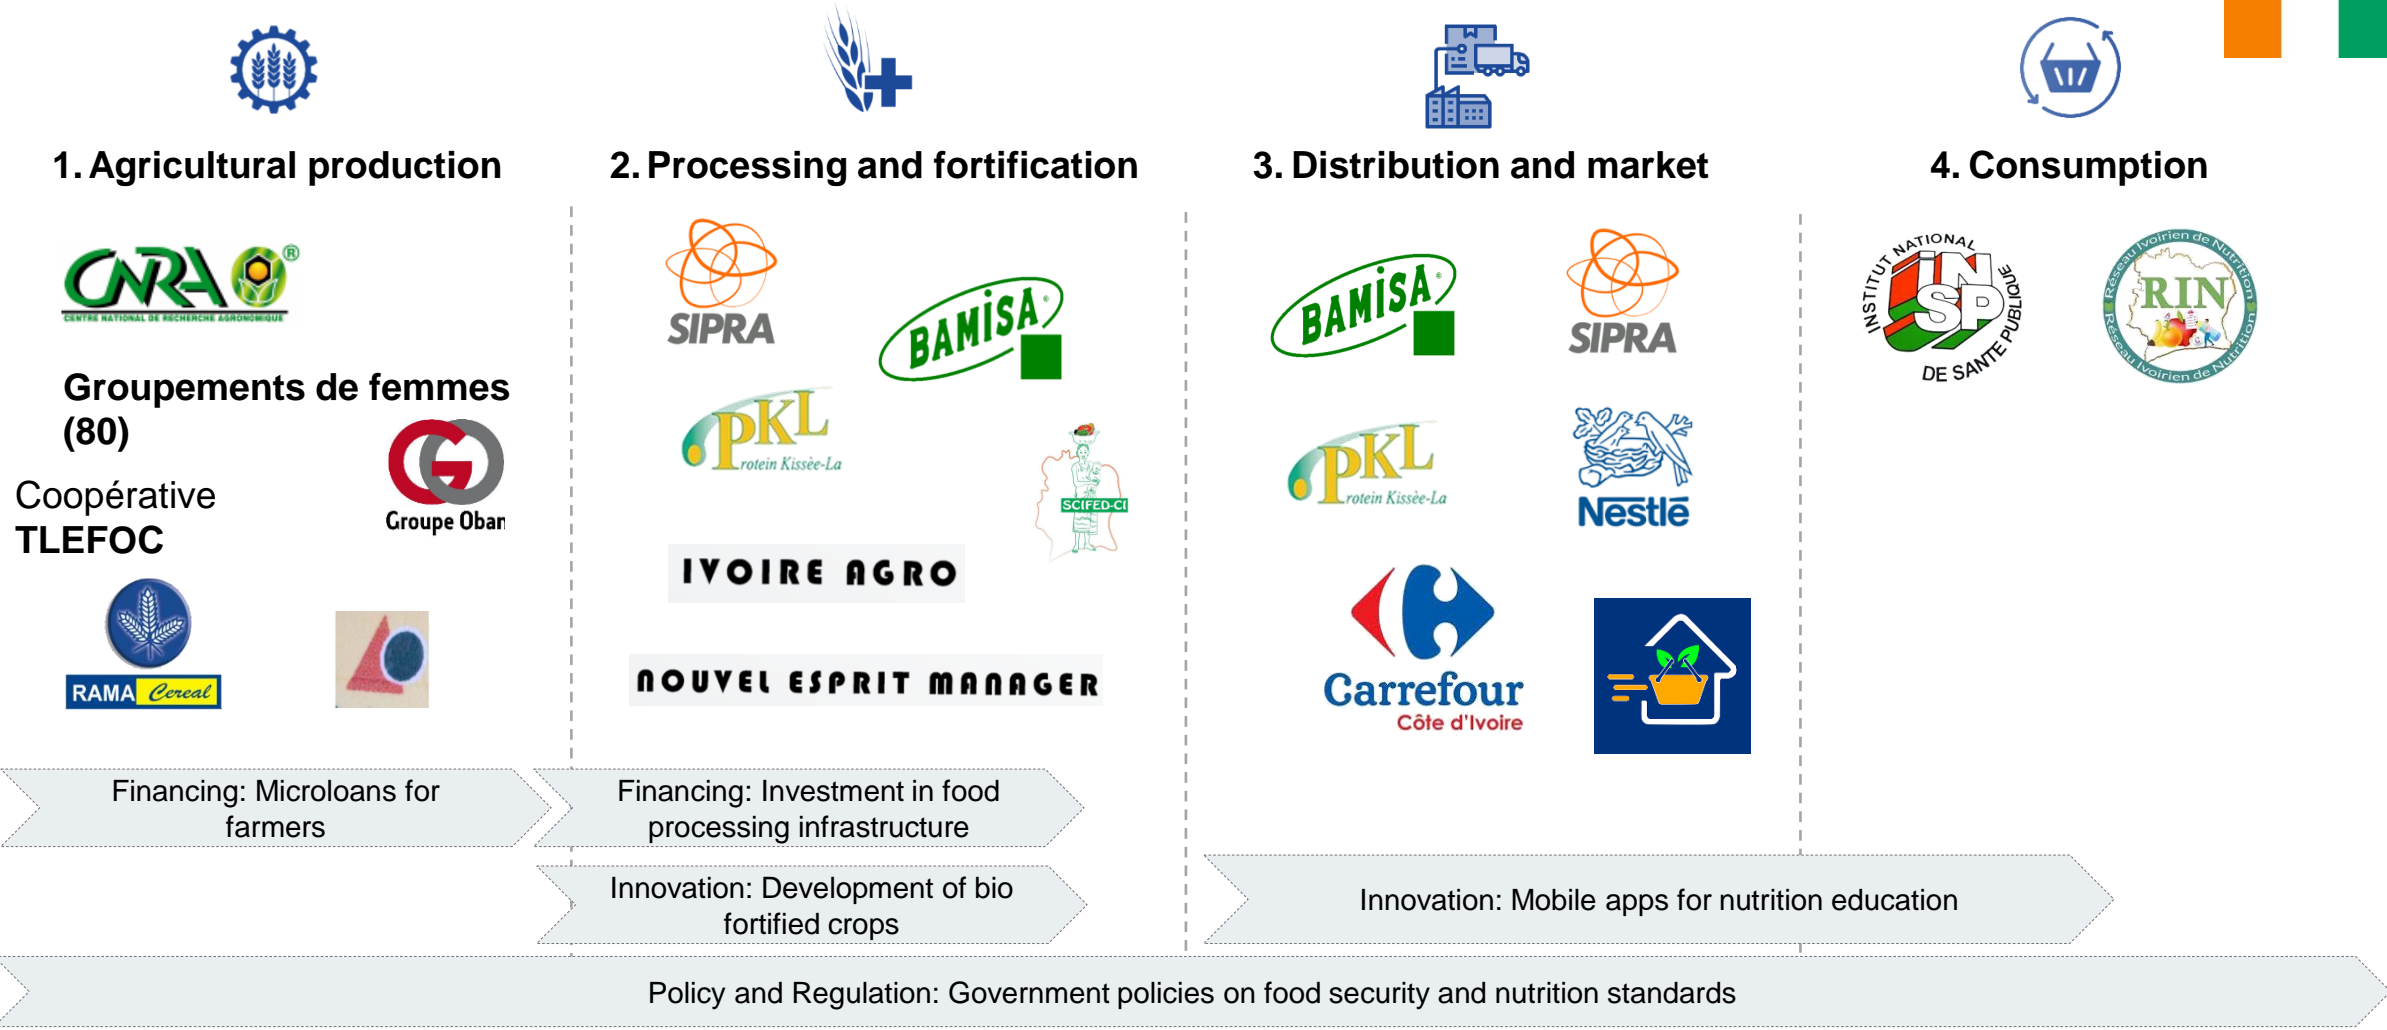

We conducted a preliminary analysis of the most critical value chain for the lowest-performing country in both sub-regions, Côte d'Ivoire

(i) Moringa, Sweet Potato and Finger Millet are nutrient-rich crops that support early childhood development
Source: République de Côte d'Ivoire, Centre National de Recherche Agronomique, Rapport des techniques culturales de la patate douce, Juin 2015; Duntower global food trade, Ivory Coast Food Market: Growth Opportunities for Meat, Poultry, and Seafood Companies; Ministry of Animal and Fisheries Resources, 2023 data; United States Department of Agriculture (USDA) Data base; Dietary diversity and associated factors among infants and young children in three West African countries; Cold chain sector and sandwich panel market, sector brief Côte d'Ivoire, GIZ; The Potential of Food Fortification to Add Micronutrients in Young Children and Women of Reproductive Age, Cross-Sectional Survey in Abidjan, Côte d'Ivoire
FAO, FOOD SYSTEMS PROFILE - CÔTE D'IVOIRE, 2022

(ii) Children aged 6–23 months
GAIN: Global Alliance for Improved Nutrition

The preliminary value chain analysis identified the key actors that make up the supply at each stage (non-exhaustive list)

Four engagement models with key value chain actors will be explored to identify mechanisms for the foundation's involvement

Public-Private Partnerships (PPP)

Corporate Social Responsibility (CSR) Initiatives

Innovation Hubs and Incubators

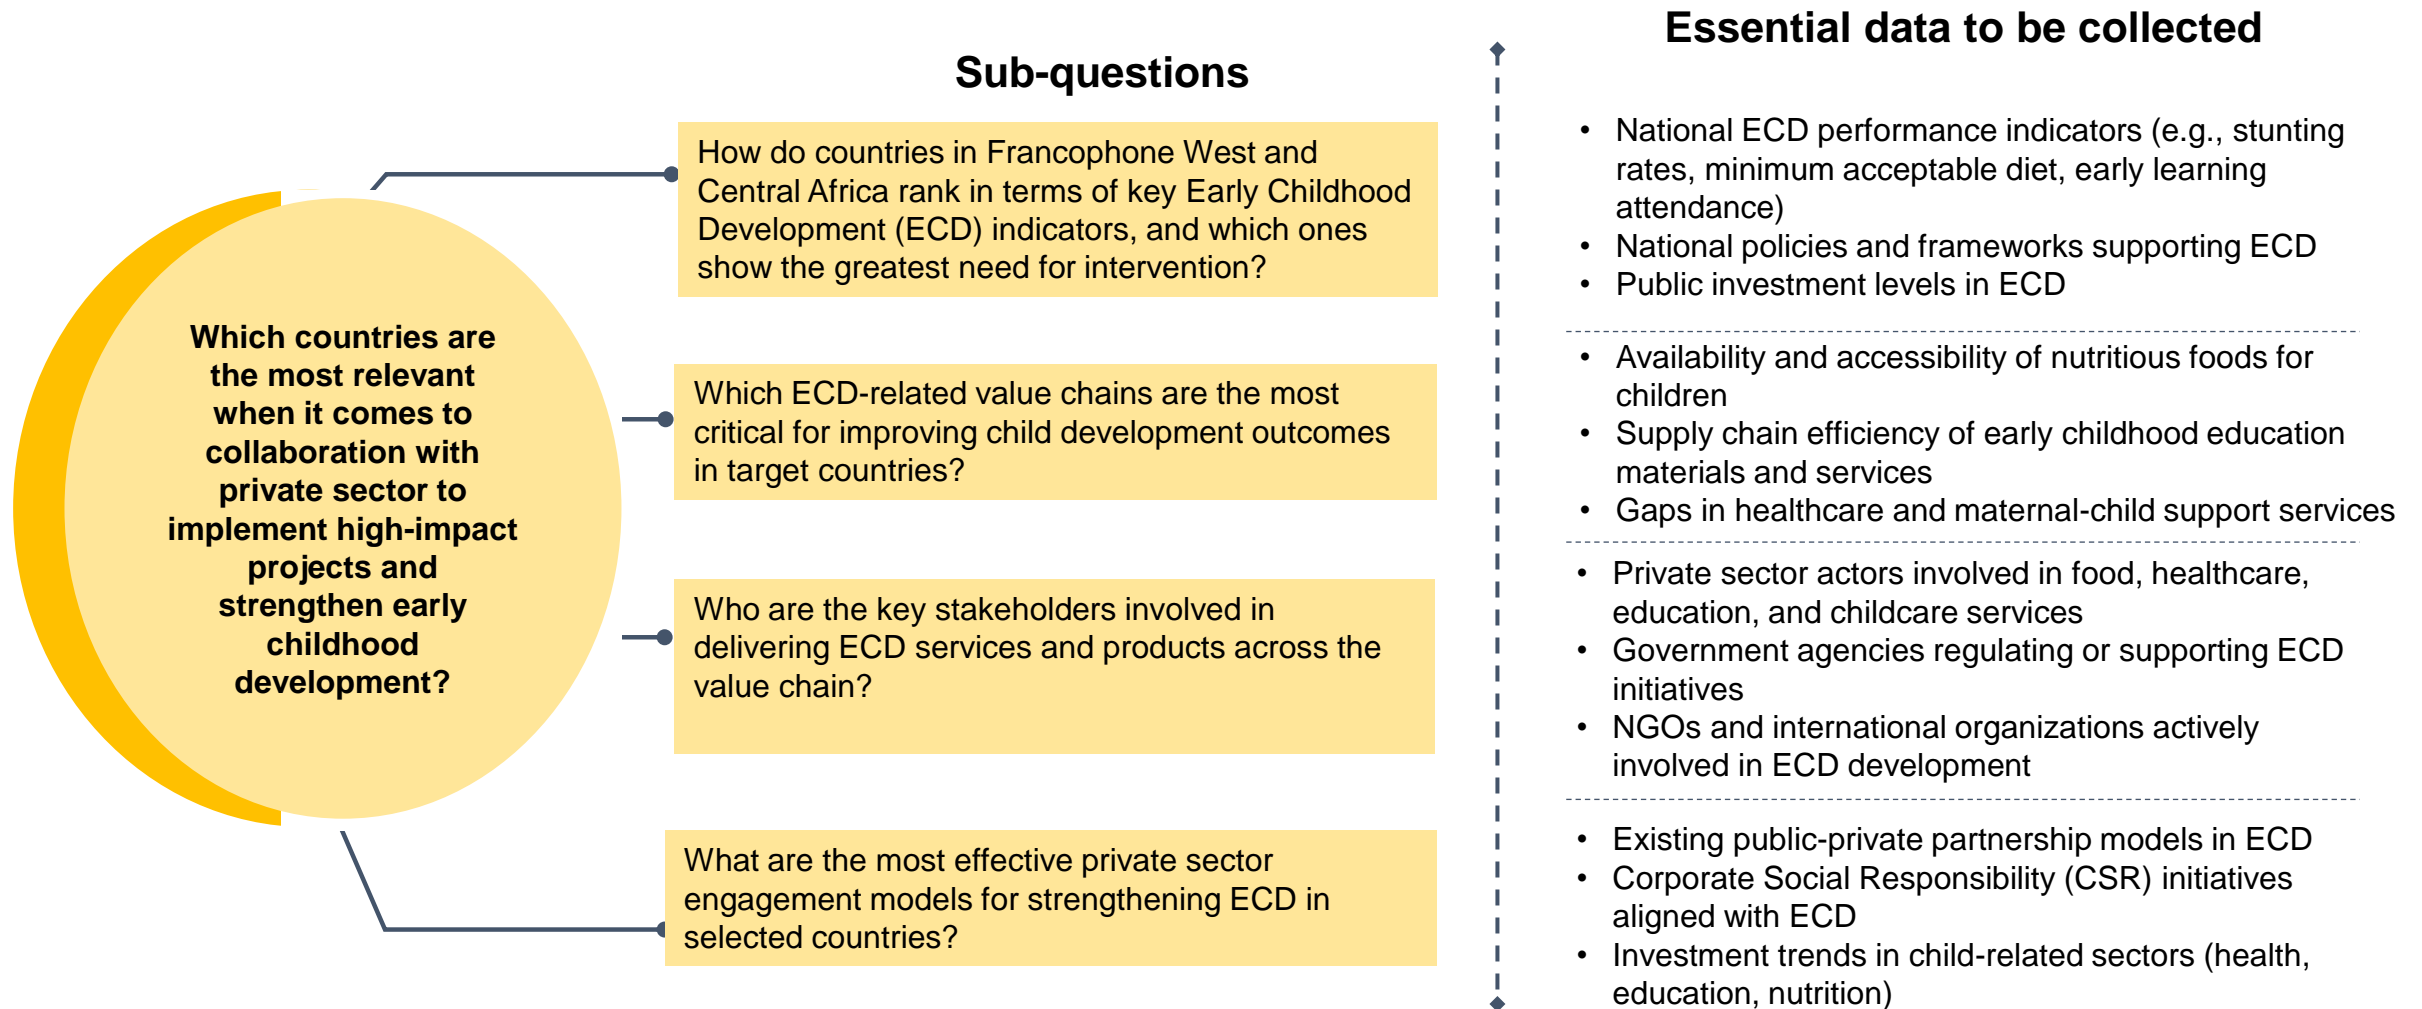

Community-Based Engagement

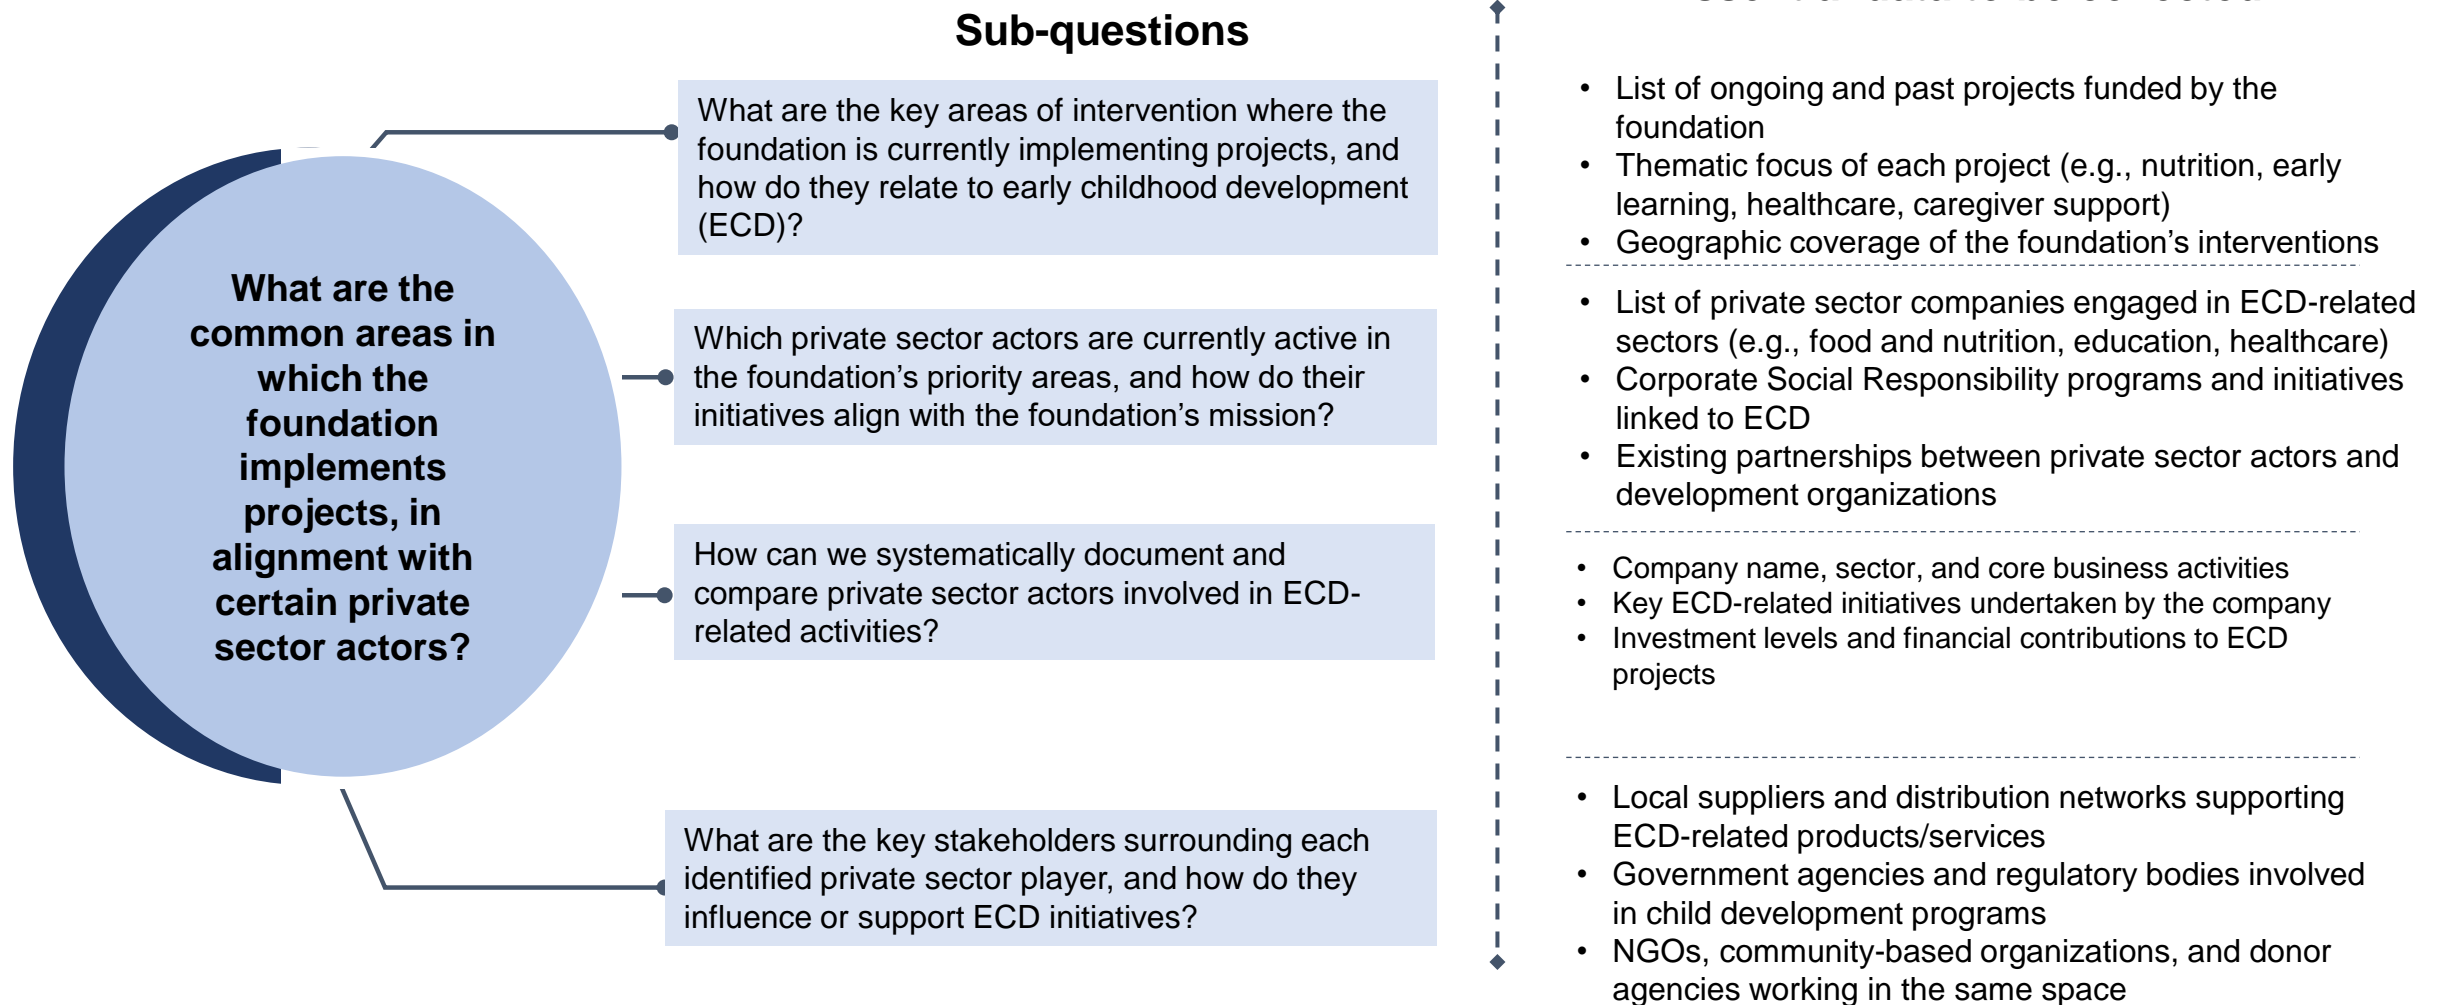

Are there any particular commitment models that interest the foundation the most?

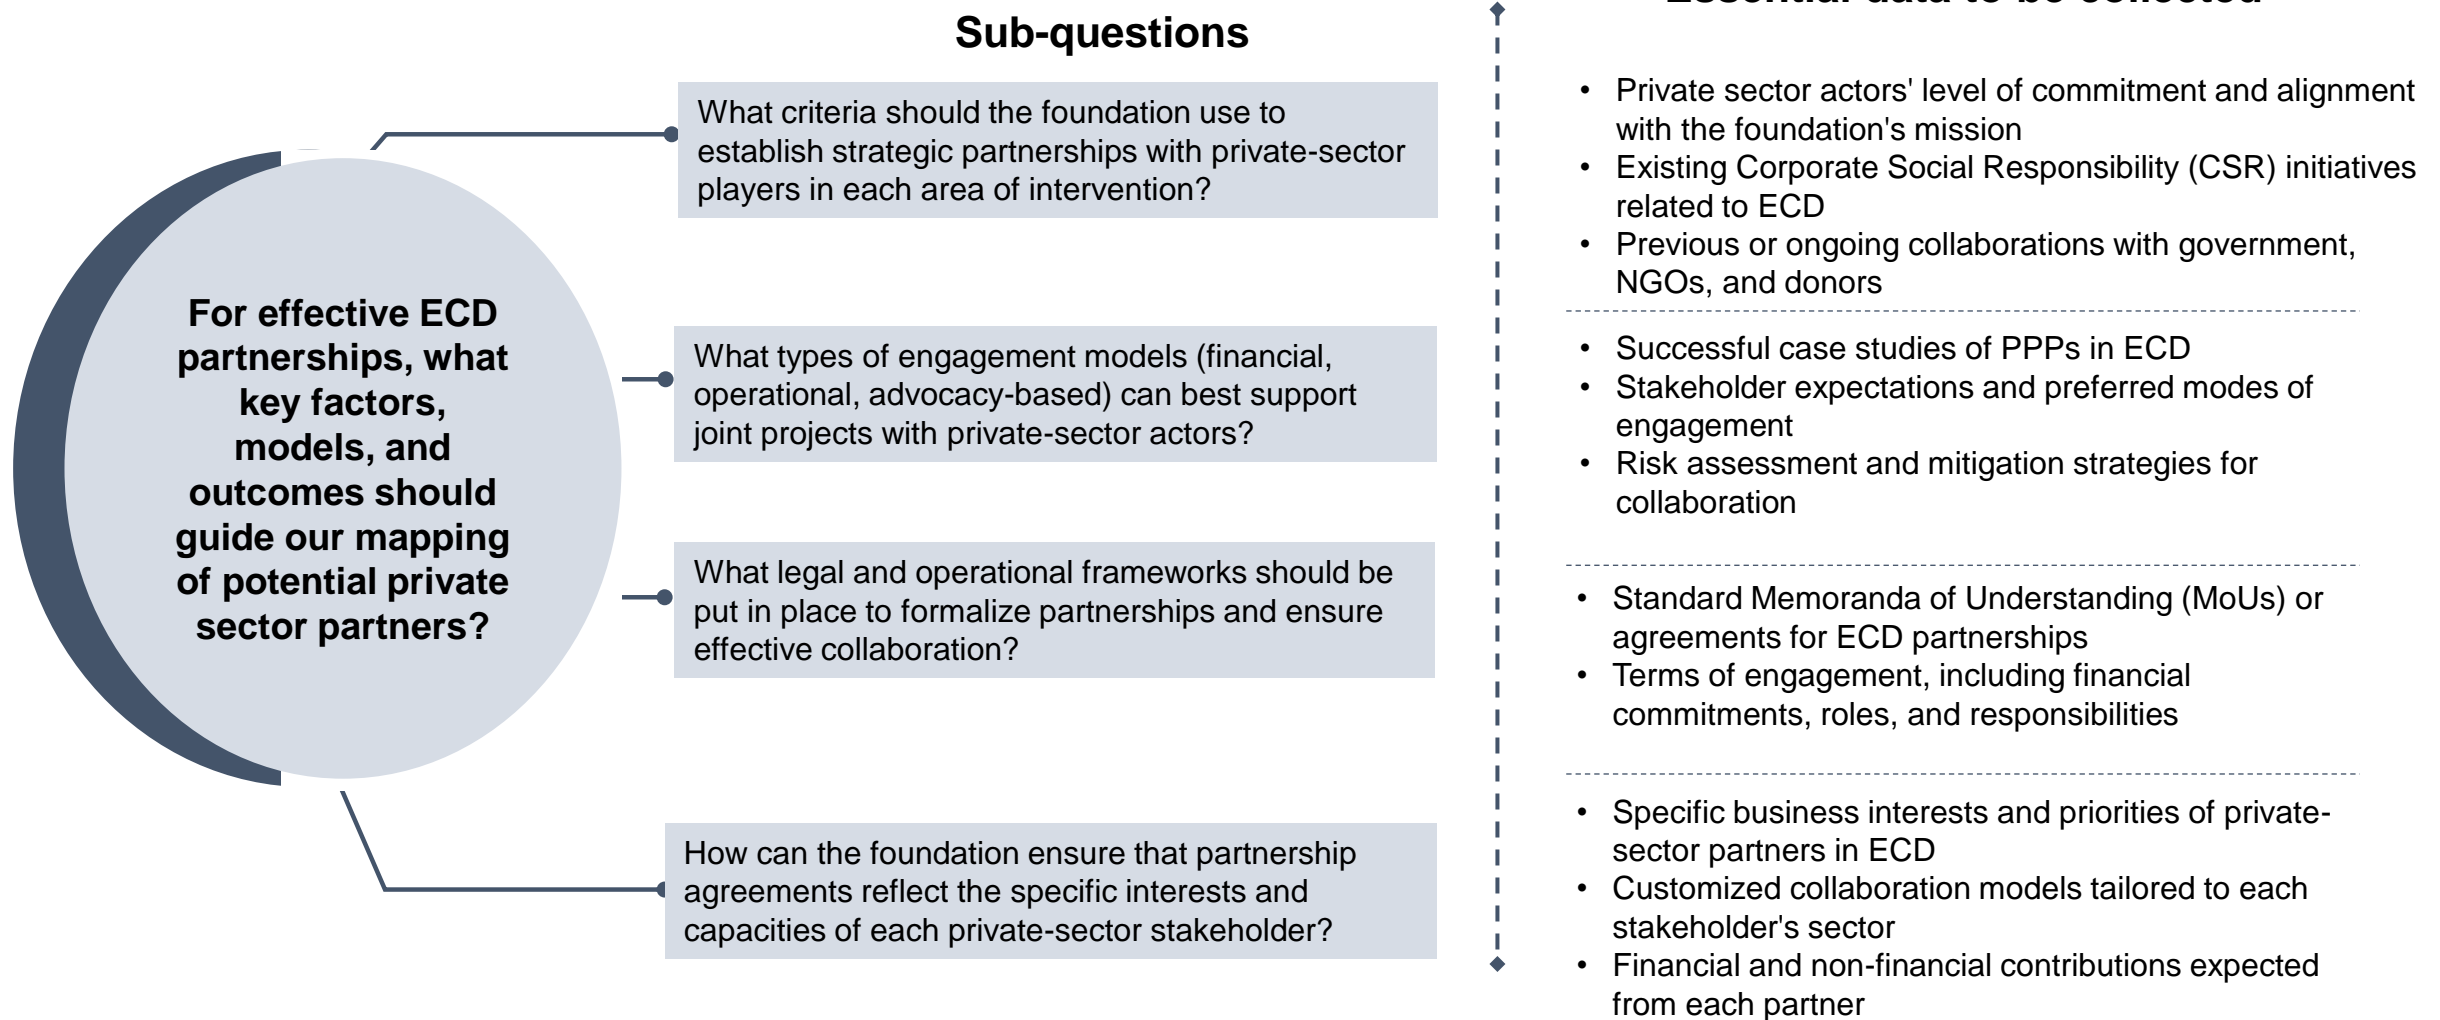

In summary, the following series of questions will guide the analyses conducted in Focus area 1

Focus area 2 preliminary mapping of private sector & philanthropic partners to VLF's themes

Focus area 3 analyzes how to develop profiles of and map potential private sector partners, ensuring both efficiency and synergy

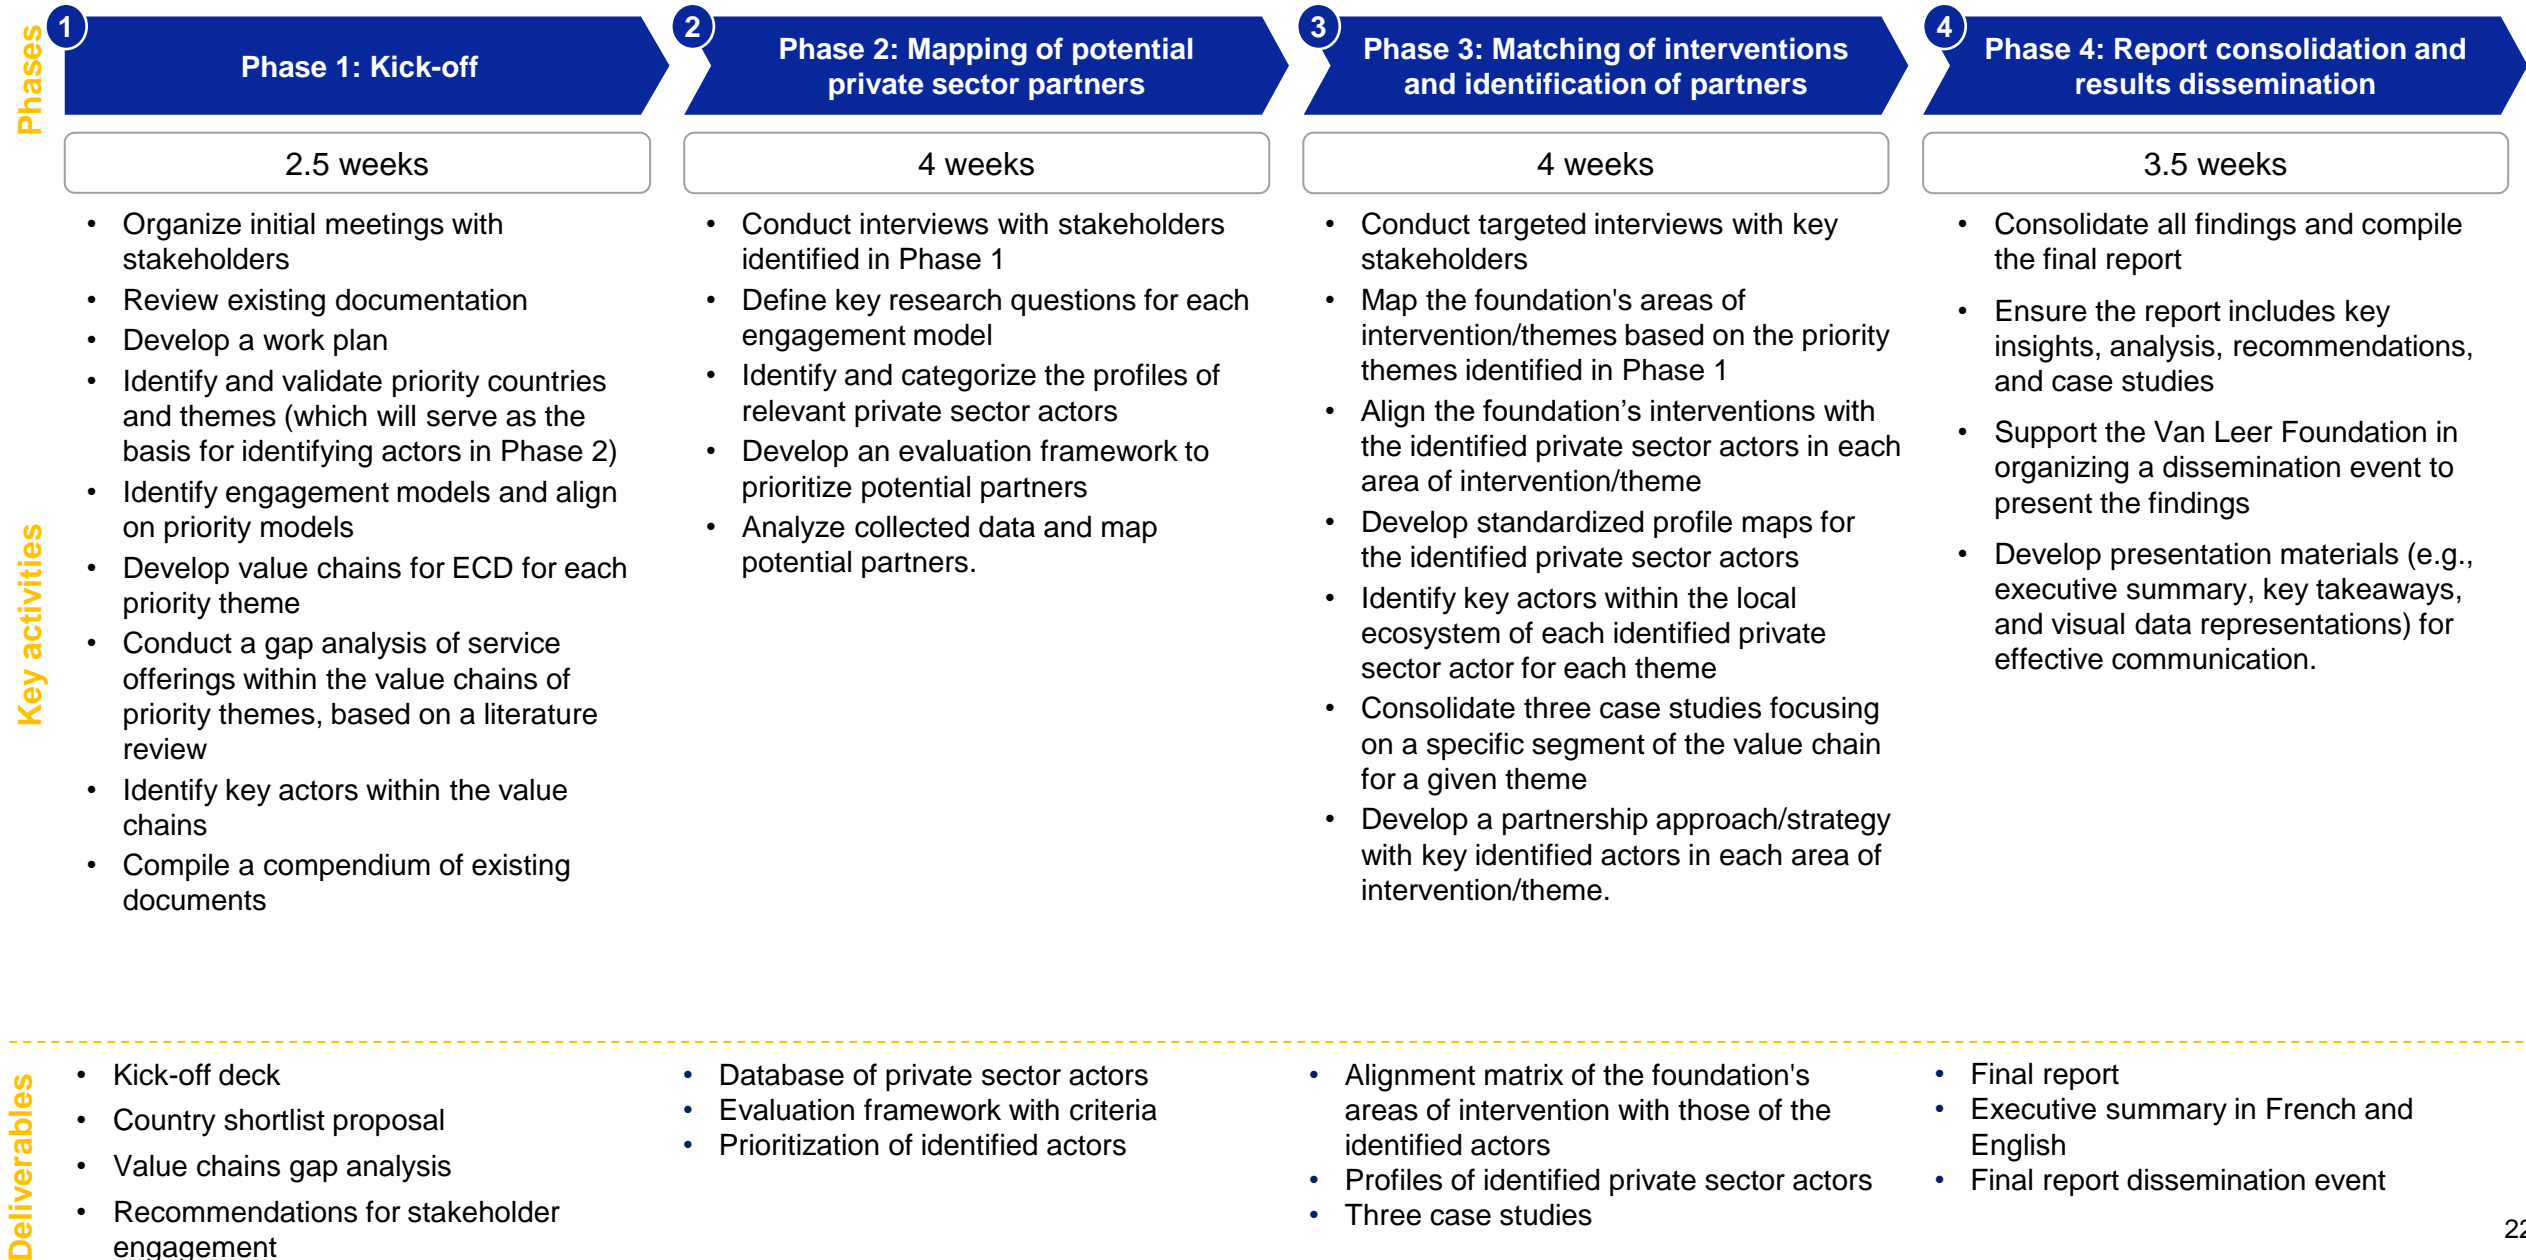

1. Context and objectives

2. Key focus areas

3. Analytical approach and preliminary findings

4. Timeline

The proposed methodology is structured under four phases spread over 23 weeks

Questions & discussion

- Any precision about the degree of detail you are aiming for?
- Are there any sectors in which you don't want to intervene?
- Are there any documents from VLF that speak more to your thinking and priorities?

THANK YOU
